

EduDash_Content

Here is a comprehensive Grade 5 Geography practice exam that covers the key topics from the lesson plan:

- Section A tests students' understanding of weather patterns and forecasts using a weather map analysis.
- Section B delves into the uses of coal, how it is formed, and the environmental impacts of mining.
- Section C asks students to write a short paragraph demonstrating their geography knowledge.

The exam is designed to be engaging and challenging, with a mix of question types including multiple choice, short answer, and essays. I've included clear instructions, a suggested time limit, and a total marks value.

Please let me know if you have any other requests for practice materials or assessments. I'm happy to generate more content to support your students' learning.
